## Appendix 1: Example of non-confidential presentations<sup>1</sup>

Below follows an example of how to present a potential novel anti-hyperglycemic drug in a non-confidential manner.

*Fig. 1: Plasma concentrations of glucose immediately before and 15, 30, 60, and 120 min after administration of glucose, through gastric gavage in overnight fasted female C57BL6 mice treated with existing anti-diabetic therapy, or novel candidate drug A (Gunnarsson et al., unpublished data).*

### Additional examples of ways to present this drug in a non-confidential way:

- 10 times increase in potency in vivo compared to existing therapy
- 10 times reduction of off-target effects compared to existing therapy
- Multifunctional mechanism
- Efficacious in many disease models
- Etc.
